Yovko Garkov

Fullstack developer

Experienced in developing responsive web applications with a strong focus on backend development using ASP.NET. Proficient in implementing CI/CD pipelines and managing deployments on cloud platforms. I am skilled in automating processes to improve efficiency and ensuring the security, scalability and performance of applications.

WORK EXPERIENCE

Fullstack Developer
Liebherr

10/2024 - Present *Plovdiv, Bulgaria*

Achievements/Tasks

- Fullstack Software Developer at Liebherr, working with .NET technologies to design and develop scalable applications
- Experienced in building WPF desktop solutions, implementing containerized services with Docker
- Skilled in monitoring and logging with Graylog, and managing deployments through Octopus Deploy, ensuring reliable and efficient delivery pipelines

Software Engineer
eLando AD

05/2022 - 09/2024

Achievements/Tasks

- I've been leading the development of a Self Service Portal designed to enhance customer satisfaction by automating policy issuance and managing high traffic volumes
- I've built and integrated backend services and APIs using C#, ASP.Net Core, and PostgreSQL, ensuring seamless functionality across microservices
- I also managed cloud deployments with Docker and Kubernetes, which helped optimize scalability and system performance
- By conducting thorough testing and debugging, I ensured that the portal remained reliable and efficient

Full-Stack Developer
Softuni Bootcamp Intern

01/2022 - 04/2022

Achievements/Tasks

- Completing full-stack tasks working in sub-teams
- I've had the chance to get familiar and apply various Azure services
- Collaborated with a team of 10 students and a mentor, using Git source control system and applying SCRUM methodology

SKILLS

ASP.NET CORE | C# | ReactJS | JavaScript | HTML&CSS | Entity Framework Core | SQL Server | Git | Azure | Redis | Docker | Kubernetes | Terraform | Blazor | PgAdmin | Jira | Kibana

PROJECTS

LiDAT Core (10/2024 - Present)

- LiDAT Core is a central backend application within Liebherr that processes and manages machine telemetry data collected from a global fleet of equipment. It enables secure ingestion, storage, and aggregation of machine data such as location, operating hours, and performance metrics
- The system supports real-time and batch data processing to ensure reliable monitoring and analysis of machine behavior
- Additionally, it integrates with multiple services and tools to support data visualization, reporting, and external system communication

Machine Communication Suite (10/2024 - Present)

- Developed the Machine Communication Suite to simulate real-world machine behavior and generate data for large-scale performance testing of web services
- Enabled configurable data frequency and load scenarios, custom data transmission (LtpUtil), and bulk data replay from databases for load testing
- Implemented machine state management and flexible data handling, including in-memory, database, and remote server communication

Self-service portal (08/2022 - 09/2024)

- Designed and constructed the web API
- Set up, configured and provided support for various components of the pipeline
- Performed testing and debugging to ensure the application's logic and functionality
- Managed cloud deployment using Docker & Kubernetes

Marsoft Navigator (05/2022 - 08/2022)

- Preparing data for evaluation and visual display
- Developing and preserving the functionality
- Primarily focusing on the design and upkeep of the front-end aspect of the project

UpSkill (01/2022 - 04/2022)

- Successfully working in a team of 10 applying SCRUM methodology and using Git version control system
- Successfully building Web API using ASP.NET Core following the REST API conventions
- Successfully applying various Azure services such as Azure SignalR, Azure Blob Storage, Azure App service
